

Hello! I have recently learned that The National Association of Broadcasters is trying to take away the local weather and traffic services that we have to receive from XM Radio. I just wanted to let you know that since we are paying for the service it should be no concern to them what information we receive from XM. We all started subscribing to XM because we were not happy with the quality of radio we received from their stations and this is an attempt to make us listen to them again. If XM radio loses the right to broadcast local weather and traffic then we will have to listen for hours to get an update from the radio stations that we do not want to listen to in the first place and it forces us not to use a service that we pay for. Please don't let them trick you into taking away our right to choose what we want to hear. Thanks
